

### Using Correction pens...

- Shake pen well (with cap on) before using
- With pen at right angle to paper, depress valve-tip and gently squeeze barrel to release the fluid
- Start the fluid flow, before applying to your document (test on a piece of scrap-paper)
- Occasionally clean the point (valve-tip) with tissue
- Do not rest the barrel on its cap; always place upright, to prevent the tip mechanism becoming blocked

---

### WARNING

Correction fluid is difficult to remove, especially from fabric and skin. Squeezing the pen with the cap on, will fix the cap to the top section of the pen. In these circumstances, never use force to remove the cap as spillage may occur
