Pentel

Pentel's new Superb Antibacterial ballpoint pen helps to improve hygiene in any organisation, offering peace of mind where people work together, have customer contact or where pens are often shared.

An invaluable part of everyday hygiene for the office, reception desk, medical ward or home Superb Antibacterial is made from a plastic that has antibacterial, biocidal properties. Both the barrel and cap contain silver ions which help to limit the activity of bacteria on the surface of the pen, significantly reducing contamination and the associated risk of infection when the pen is used and shared with others.

HOW DOES IT WORK?

Silver ions affect bacteria in a number of ways: the cell membrane is destroyed; enzymes in cells are made inactive and duplication of genetic information is prevented, so bacteria do not reproduce easily. This antibacterial effect is permanent and lasts as long as the pen itself.

Available with black or blue ink Superb Antibacterial is perfect for public-facing applications, especially in the fields of healthcare, tourism and hospitality, manufacturing or education and administration. A convenient mixed pack of four is also supplied.

Contact your Pentel representative or regular stationery supplier to find out more about Superb Antibacterial.
